xero

XERO

The desktop studio Solana builders live in.

A local-first AI IDE — and a Solana workbench that replaces the five subscriptions every team pays for.

- solana workbench · paid bundle
- agent harness
- local-first desktop

WHAT THE BUNDLE REPLACES

• LAUNCHING Q3

RPC + Sender provider	$149/mo
Indexer · DAS · webhooks	$99/mo
Block explorer pro	$49/mo
Deploy + audit tooling	$79/mo
AI coding assistant	$40/mo

RETAIL (5 VENDORS) ~~$416~~/mo → XERO SOLANA BUNDLE $50/mo

88% wholesale discount. One sub. One invoice. Live in builders' hands today.

WHAT'S BROKEN

Solana's tools are great. They just don't sit in the same window.

Every serious Solana team pays five vendors, runs four browser tabs, and re-wires the same toolchain in every repo. The infra exists — the workspace doesn't.

rpc · indexer · explorer · deploy · agent

01

Five vendors, five invoices, one tired dev.

RPC, indexer, explorer, deploy tooling, AI agent. Five logins, five bills, five dashboards — paid every month before a single transaction lands.

localnet ↔ mainnet

02

Local and mainnet feel like two products.

Fork and seed locally, then rewire everything for real reads and sends. Personas, IDL drift, priority fees, ALTs — every team re-builds the same harness.

editor → logs → explorer → docs

03

Context dies between tabs.

Code in the editor, logs in the terminal, txs in the explorer, IDLs in a doc. By the time you've found the answer, your agent has forgotten the question.

WHAT XERO IS

A desktop IDE with a Solana workbench built in.

Free for everyone. One paid plan that bundles the Solana stack into a single subscription.

01 **Local-first desktop IDE**

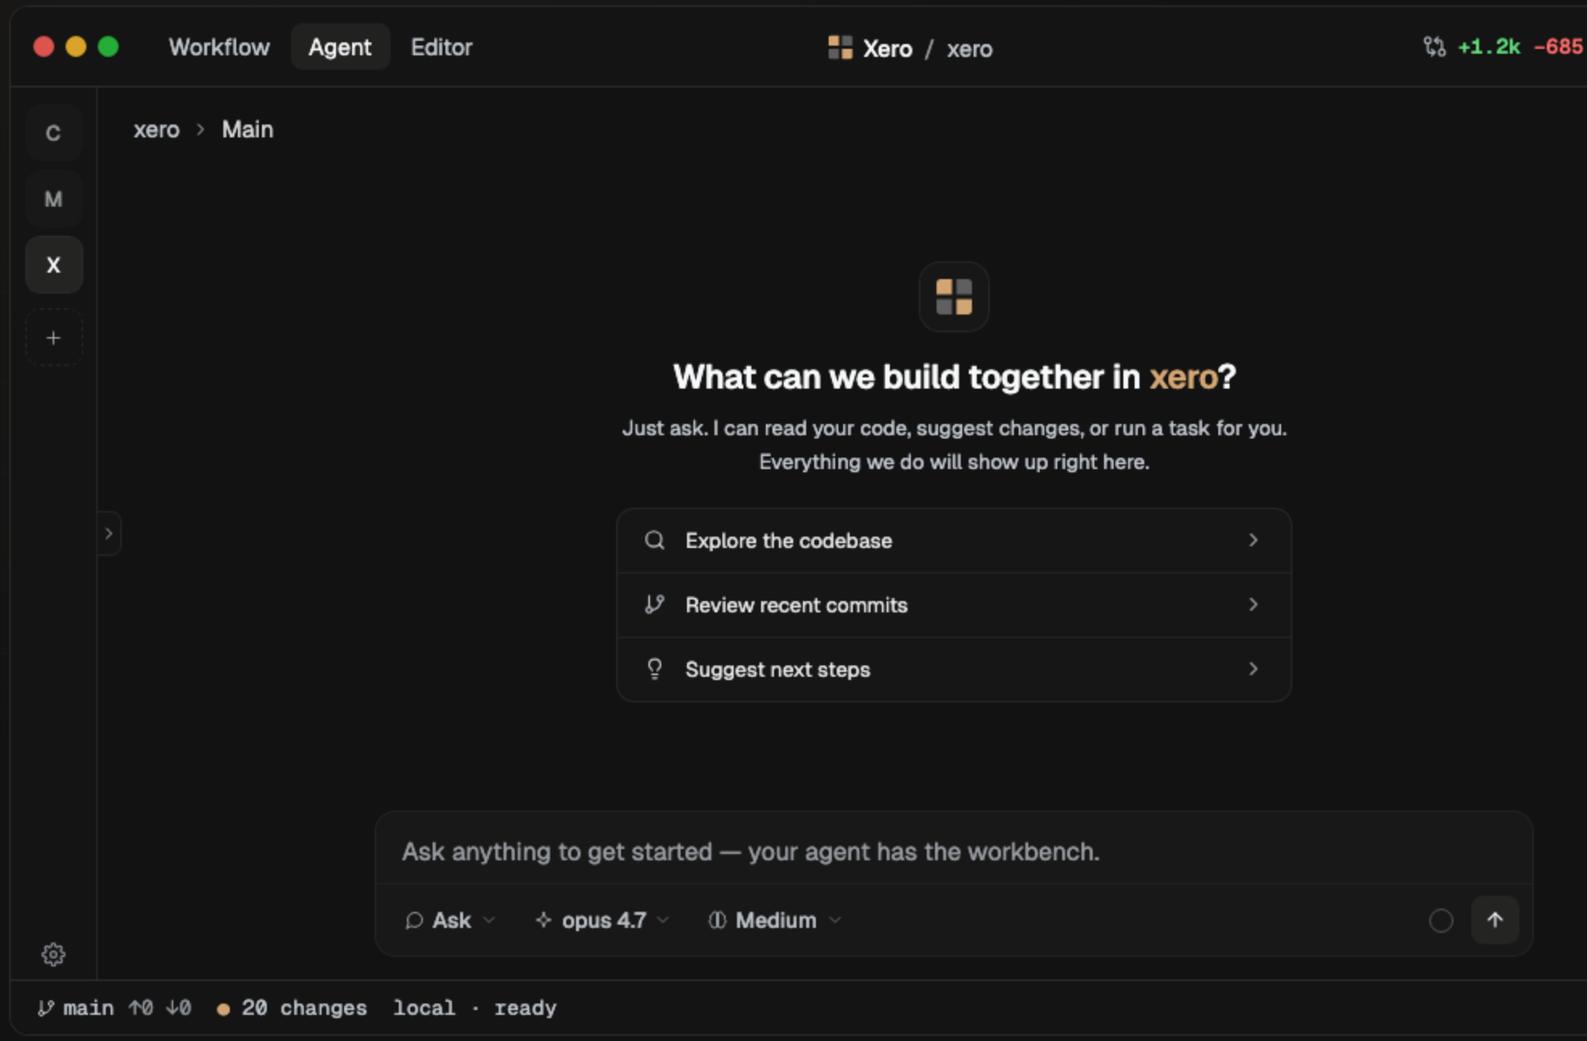
Rust + Tauri v2. Code, keys, projects on your machine. Free forever, every feature.

02 **Solana workbench · the paid plan**

79 `solana_*` commands. Forks, personas, tx pipeline, audit, deploy gates. RPC + indexer + explorer bundled in.

03 **One bill replaces five**

$50/mo bundles what teams already pay 4–5 vendors for. Wholesale economics under the hood.



THE WORKBENCH IN BUILDERS' HANDS

The Solana workbench is the product the bundle pays for.

79 `solana_*` commands. 13 workbench tabs. Fork, simulate, deploy, audit — under one window, with the agent in the seat next to you.

79

`solana_*` commands shipped — 24 already mounted as agent tools. The whole Solana surface, scriptable.

CLUSTERS

Local → mainnet-fork

Surfpool / mainnet-fork lifecycle, snapshots, managed installs, cost ledger.

PERSONAS

Seeded actors

Whale, LP, voter, liquidator, new user — funded keypairs ready for scenario runs.

TX PIPELINE

Build · simulate · land

Priority-fee estimator, compute-budget, ALT helpers, CPI resolver — Sender API on by default.

DEPLOY SAFETY

IDL + upgrade gates

Codama gen, IDL drift, Squads proposals, verified builds, rollback path.

SECURITY

Audit + replay

Trident fuzz, coverage, exploit replay, PDA scans, secret detection.

AGENTS

Tools next to the code

Stage-gated harness, branch / rewind / compact, MCP registry, 11 model providers.

BUILT. WANTED. ABOUT TO SHIP.

Pre-revenue by choice. The product is done — we're opening the bundle next quarter.

DESIGN PARTNERS	ALPHA BUILDERS	WAITLIST	BUNDLE LAUNCH
8	124	1,840	Q3
▲ Solana teams on closed alpha	▲ individual devs invited in	▲ organic, no paid spend	▲ public GA · paid plan opens

"Five subscriptions, four dashboards, one tired team. We've been waiting for someone to bundle this for two years.

LE — **LEAD ENGINEER**
SOLANA PERP DEX · 3 DEVS

"The mainnet fork + persona setup that took us a sprint to wire up is two clicks in Xero. We're moving the whole shop.

CF — **CO-FOUNDER**
NFT LIQUIDITY PROTOCOL

"Our agents call infra all day. Wholesale pricing inside the bundle is the only way this is sustainable for us.

FE — **FOUNDING ENGINEER**
DEFI YIELD AGGREGATOR

MARKET OPPORTUNITY

Solana builders pay for infra every month — we just give them one bill.

TAM

$2.1B
SOLANA DEV INFRA

Annual Solana dev infra spend — RPC, indexers, explorers, deploy, agent tooling.

SAM

$540M
BUNDLE-ADDRESSABLE

Teams already paying 4–5 infra subs they could collapse into one bundle.

SOM

$72M
3-YR TARGET

~12,000 bundle seats at $50/mo by 2029 — 12% of active Solana devs.

Why this is a paid product, not a free one.

Solana teams already pay for the infra. The Xero bundle just wholesales the same rails — RPC, indexer, explorer, deploy — and charges less than the sum of the parts.

100k+ active Solana developers — every team pays for infra before line one ships.

$420 avg monthly infra spend per team — 4–5 vendors, all collapsible into the bundle.

10× query volume when agents drive infra — bundle credits scale with usage.

FREE DESKTOP · PAID SOLANA BUNDLE

One paid plan. Everything a Solana team already pays for — wholesaled into a single subscription.

Free

FOREVER

$0 / month

Full desktop app. Every feature, every model, BYO keys. No trial timer.

WHAT'S INCLUDED

- Local desktop IDE
- 11 model providers · BYO keys
- Agent harness · all stages
- Branch, rewind, compact, handoff
- MCP server registry

Solana Bundle

REVENUE · 100%

$50 / month

The Solana workbench, all infra included. One sub, one invoice, wholesale economics.

BUNDLE INCLUDES

- RPC + Sender + Priority Fee API
- Indexer · DAS, webhooks, streams
- Block explorer · tx + account views
- Squads + verified-build deploy gates
- Trident fuzz · audit · exploit replay

What the bundle replaces.

A typical Solana team pays five vendors a month. The bundle consolidates them at wholesale, well under retail.

RPC + Sender provider	~~$149~~
Indexer / DAS / webhooks	~~$99~~
Block explorer pro	~~$49~~
Deploy + audit tooling	~~$79~~
AI coding assistant	~~$40~~
WAS → BUNDLE	~~$416~~ $50

TARGET BUNDLE GROSS MARGIN	BUNDLE WHOLESALE DISCOUNT	MODEL COST COVERAGE	TARGET LTV / CAC
~62%	88% vs. retail	5× bundle floor	5–7× yr 2

WHERE XERO SITS

The desktop-native, agent-first quadrant is wide open.

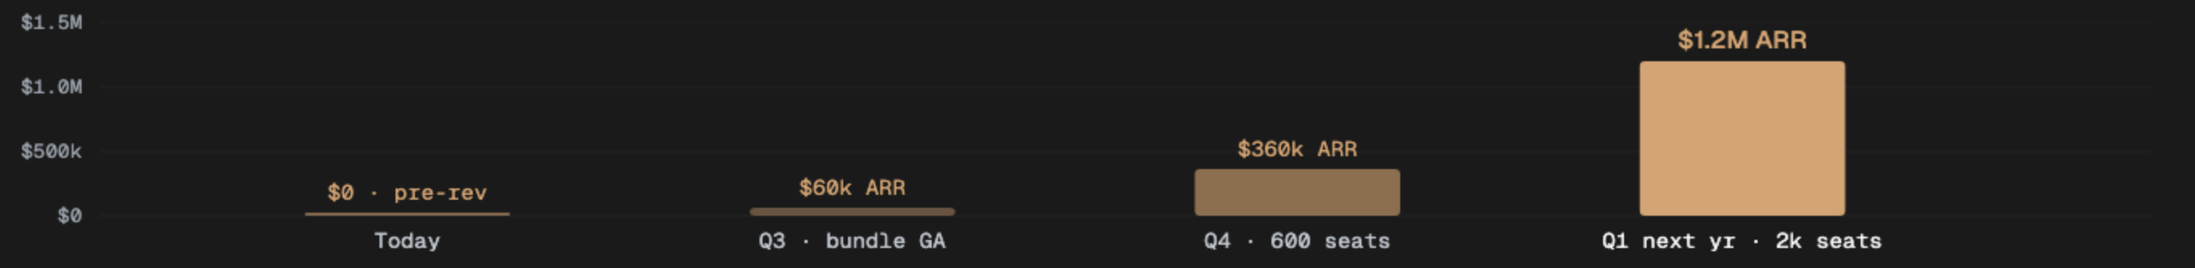
	XERO	CLOUD IDE	EDITOR COPILOT	TERMINAL AI
Runs locally	●	○	◐	●
Agents w/ stages	●	●	○	◐
Multi-provider	●	◐	○	◐
Session branching	●	○	○	○
MCP registry	●	◐	○	○
BYO keys	●	○	○	●

THE PLAN

$0 today. $1.2M ARR target in twelve months. Grounded in waitlist, not a hockey stick.

ARR forecast · today → +4 quarters

8 design partners + 1,840 waitlist · ~10% conversion = 2,000 seats by year-end



NOW · Q2

Bundle GA

- RPC + Sender wholesale live
- Indexer + DAS credentials in-bundle
- One invoice, auto top-up

Q3

Workbench depth

- Squads + verified-build deploy gates
- Audit · Trident fuzz default-on
- Lana / explorer tab integration

Q4

Teams + expansion

- Team seats · pooled bundle credits
- Shared personas + audit history
- Slack + Linear handoffs

Q1 +1YR

Enterprise + scale

- Dedicated RPC nodes in-bundle
- Self-hosted control plane
- First 10 enterprise contracts

TEAM · THE ASK

Built by people who've shipped the infra they're now bundling.

AY **Andrew Yurlov**
Founder · CEO

Shipped dev tooling used by 50k+ engineers. Lives in the harness.

CT **Co-founder**
CTO · platform

Rust + systems lead. Built native apps for ML infra companies.

DS **Design lead**
Product · design

IDE-class UX at two unicorn dev-tool companies.

ML **ML engineer**
Agents · evals

Built agent harnesses inside a frontier lab. Owns evals + routing.

• THE ROUND

Raising a Seed round.

$2M

$10M pre-money · 18-month runway · close Q3
